

Razorpay Account Setup

INDIVIDUAL / SOLE-PROPRIETOR GUIDE

How to start accepting UPI, card and net-banking payments on your website

Prepared for: **Richa Marwaha Jain**
Prepared by: **Priyank Bohra**
Version 1.0

OVERVIEW

What is Razorpay and what will you do?

Razorpay is the payment service your website uses. When a customer pays by UPI, card or net-banking, Razorpay collects the money and sends it to **your own bank account**. You need to create the account yourself, in your name, because it will hold your KYC and your bank details - we only connect it to the website afterwards.

> **At a glance**
> The whole process has 5 steps: **1** create account, **2** complete KYC, **3** wait for approval, **4** get the website keys, **5** final settings. Set aside about 20-30 minutes for steps 1-2 with your documents in hand.

Keep these ready before you start

What	Notes
PAN card (your personal PAN)	Your name must match your bank account exactly.
Aadhaar card	The mobile number linked to Aadhaar must be with you - you will get an OTP on it (Aadhaar eKYC).
Bank account in your own name	Keep a cancelled cheque or the first page of the passbook (account number, IFSC and your name visible).
Mobile number and email	Use the business Gmail from the checklist, if you have created it.
Passport-size photo	Some flows ask for it.
Short description of what you sell	e.g. "Anti-tarnish and festive artificial jewellery sold online".
Website / Instagram link	Razorpay checks that the business is real. We will give you the website link when it is live; the Instagram page can be used until then.
Optional: Udyam / Shop & Establishment certificate, GST certificate	Not required in every case. If you have no GST number, choose "I don't have a GSTIN" when asked.

Razorpay's own sources are not fully consistent on whether business-registration proof is needed for individuals - the checklist shown inside your Razorpay dashboard is the final word.

1 Create the account

- Open **razorpay.com** and click **Sign Up**.
- Enter your business email and mobile number, and create a strong password (save it in a safe place).
- Verify the OTP sent to your phone (and to your email, if asked).
- Razorpay opens your dashboard in **Test Mode**. Nothing here moves real money - it is only for practice and for our testing.

2 Activate the account (complete KYC)

- In the dashboard click **Activate Account** (or the banner "Complete your KYC").
- **Business type:** choose **Individual**. Razorpay's documentation says the Individual type has a **one-time onboarding fee of Rs. 199** - check the amount shown on your screen.
- **Business details:** business name ("Jewels by Richa"), what you sell, and your website or Instagram link.
- **PAN:** enter your PAN and your name exactly as on the card.
- **Aadhaar eKYC:** enter the 12-digit Aadhaar number and confirm with the OTP sent to the Aadhaar-linked mobile.
- **Address:** your address as on your ID.
- **Bank details:** account number, IFSC and account-holder name (your own name). Upload the cancelled cheque or passbook page if asked.
- **Policy pages:** Razorpay asks for your Terms, Privacy, Refund and Shipping policy pages. Placeholder pages already exist on the website; once you approve the final wording we will send you the links to enter here.
- Review everything carefully and click **Submit**.

> Tip: upload clear, well-lit photos or PDFs (no blur, no cut-off corners). Most rejections happen because the name on PAN, Aadhaar and bank account do not match, or a document is unreadable.

3 Wait for approval

- The dashboard shows **"KYC under review"**. How long it takes depends on the checks Razorpay needs to run; if you already have a Central KYC record it can be much faster.
- If Razorpay needs more information, it appears in the dashboard as a **clarification request** and is also emailed. Reply as soon as possible - delays usually come from slow replies.
- If you are ever unsure what to answer, take a screenshot and send it to us - we will help.
- When the status changes to **Activated**, you can accept real payments.

4 Get the keys for the website

- Dashboard → **Account & Settings** → **API Keys** → **Generate Key**. You will see a **Key ID** and a **Key Secret**.
- **The Key Secret is shown only once.** Download it and keep it somewhere safe.
- **Do not send the Key Secret on WhatsApp or in any group chat.** Keep it between you and us; we will enter it into the website's hosting settings together on a short call.
- We will first test with the separate **Test Mode** key pair, so no real money is used. Live keys are added only after testing succeeds.
- Dashboard → **Account & Settings** → **Webhooks** → **Add new webhook** and fill in:

Field	What to enter
Webhook URL	https://<your-website-domain>/api/payments/webhook (we will give you the exact address)
Secret	Any long random text you choose - note it down, we need it too (share it on the call, not in chat).
Events to tick	payment.captured payment.failed order.paid

5 Final settings

- **Payment methods:** keep UPI, cards and net-banking switched on.
- **Settlement:** check that your bank account shows correctly in the dashboard; settlements go to it on Razorpay's schedule.
- **Refunds:** when a paid order is cancelled, the admin panel marks it "refund due". The refund itself is made by you in Razorpay: **Transactions → Payments → open the payment → Refund**.
- **Notifications:** add your email and phone for payment and settlement alerts.

What to send us when you are done

	WHAT WE NEED	YOUR ANSWER / NOTES
☐	**Message: "Razorpay is activated"** Or tell us if it is stuck on "KYC under review" or a clarification is requested.	
☐	**Your Key ID** This one is safe to share in chat. It starts with rzp_test_ (test) or rzp_live_ (live).	
☐	**A time for a short call** So we can add the Key Secret and Webhook Secret together - without sending them in chat.	

Safety reminder
Never share your Razorpay password, OTPs or the Key Secret in a chat. We will never ask for your password or OTP - only the steps above.
